

## News RELEASE

### Clinic Cancer Care's Radiation Oncology Department Receives Highest Honors

Clinic Cancer Care has been awarded accreditation for its radiation oncology practice through the American College of Radiation Oncology. A full, three-year accreditation was given, the maximum amount awarded to new practices. In its summary report ACRO stated that the Clinic Cancer Care radiation oncology practice not only meets but in many aspects exceeds the ACRO standards for accreditation.

The accreditation process is a voluntary one, and allows radiation oncology practices to open themselves to rigorous peer review in determining if their facilities, staffing, and treatment programs are in alignment with accepted standards of practice in modern day radiation therapy delivered in the United States.

Clinic Cancer Care was evaluated in many areas: its radiation treatment process, organization of patient charts and documents, medical physics, which includes quality improvement and radiation safety, policies and procedures, staffing and continuing education. The radiation oncology practice received positive assessment in all areas. Receiving accreditation through ACRO allows Clinic Cancer Care to move forward in its process toward obtaining approval through the American College of Surgeons Commission on Cancer, for the entire cancer program. Clinic Cancer Care is proud to receive accreditation for radiation oncology.
